Porphyria

Seven types of porphyria are recognized . The light sensitivity in the six types with cutaneous lesions is

In

erythropoietic porphyria,

a very rare disease that typically

In

erythropoietic protoporphyria

the usual reaction to light is **erythema**

In *porphyria variegata*, different members of the same family may have either c

Three forms of *porphyria cutanea tarda* can be distinguished: sporadic form, and hepatoerythroid

acquired damaging factor to liver function is needed. The damaging agent most commonly is ethanol, but

In the *familial form*, a dominantly inherited disorder, in addition to the hepatic

In the very rare *hepatoerythropoietic form* the skin lesions appear in childhood and the activity of u
